

Course Name	Performance Tuning and Optimizing SQL Databases
Course Code	10987-C
Course Duration	4 Days
Course Structure	Instructor-Led
Course Overview	This four-day instructor-led course provides students who manage and maintain SQL Server databases with the knowledge and skills to performance tune and optimize their databases.
Audience Profile	<p>The primary audience for this course is individuals who administer and maintain SQL Server databases and are responsible for optimal performance of SQL Server instances that they manage. These individuals also write queries against data and need to ensure optimal execution performance of the workloads.</p> <p>The secondary audiences for this course are individuals who develop applications that deliver content from SQL Server databases.</p>
Course Prerequisites	<p>In addition to their professional experience, students who attend this training should already have the following technical knowledge:</p> <p>Basic knowledge of the Microsoft Windows operating system and its core functionality. Working knowledge of database administration and maintenance. Working knowledge of Transact-SQL.</p>
Course Outcome	<p>After completing this course, students will be able to:</p> <ul style="list-style-type: none"> • Describe the high level architectural overview of SQL Server and its various components. • Describe the SQL Server execution model, waits and queues. • Describe core I/O concepts, Storage Area Networks and performance testing. • Describe architectural concepts and best practices related to data files for user databases and TempDB. • Describe architectural concepts and best practices related to Concurrency, Transactions, Isolation Levels and Locking.

	<ul style="list-style-type: none"> • Describe architectural concepts of the Optimizer and how to identify and fix query plan issues. • Describe architectural concepts, troubleshooting scenarios and best practices related to Plan Cache. • Describe architectural concepts, troubleshooting strategy and usage scenarios for Extended Events. • Explain data collection strategy and techniques to analyze collected data. • Understand techniques to identify and diagnose bottlenecks to improve overall performance.
Assessment/Evaluation	<p>This course will prepare delegates to take the exam Performance Tuning and Optimizing SQL Databases</p> <p>Successfully passing this exam will result in the attainment of the Performance Tuning and Optimizing SQL Databases and Certificate of Attendance issued by IT-IQ Botswana</p>

Course Details	
Topic	<p>Topic 1: SQL Server Architecture, Scheduling, and Waits This Topic covers high level architectural overview of SQL Server and its various components. It dives deep into SQL Server execution model, waits and queues.</p> <p>Lessons</p> <ul style="list-style-type: none"> • SQL Server Components and SQL OS • Windows Scheduling vs SQL Scheduling • Waits and Queues <p>Lab: SQL Server Architecture, Scheduling, and Waits</p>

	<p>After completing this Topic, you will be able to:</p> <ul style="list-style-type: none">• Describe the SQL Server components and SQL OS• Describe the differences between Windows Scheduling and SQL scheduling• Describe waits and queues <p>Topic 2: SQL Server I/O This Topic covers core I/O concepts, Storage Area Networks and performance testing. It focuses on SQL Server I/O operations and how to test storage performance.</p> <p>Lessons</p> <ul style="list-style-type: none">• Core Concepts• Storage Solutions• I/O Setup and Testing <p>Lab: Testing Storage Performance</p> <p>After completing this Topic, you will be able to:</p> <ul style="list-style-type: none">• Describe the core concepts of SQL I/O• Describe storage solutions• Setup and test I/O <p>Topic 3: Database Structures This Topic covers Database Structures, Data File and TempDB Internals. It focuses on architectural concepts and best practices related to data files for user databases and TempDB.</p> <p>Lessons</p> <ul style="list-style-type: none">• Database Structure Internals• Data File Internals• TempDB Internals <p>Lab: Database Structures</p>
--	--

After completing this Topic, you will be able to:

- Describe the internal setup of database structures
- Describe the internal setup of data files.
- Describe the internal setup of TempDB

Topic 4: SQL Server Memory

This Topic covers Windows and SQL Server Memory internals. It focuses on architectural concepts and best practices related to SQL Server Memory Configuration.

Lessons

- Windows Memory
- SQL Server Memory
- In-Memory OLTP

Lab: SQL Server Memory

After completing this Topic, you will be able to:

- Describe the components of Windows memory
- Describe the components of SQL Server memory
- Describe In-Memory OLTP

Topic 5: SQL Server Concurrency

This Topic covers Transactions and Locking Internals. It focuses on architectural concepts and best practices related to Concurrency, Transactions, Isolation Levels and Locking.

Lessons

- Concurrency and Transactions
- Locking Internals

Lab: SQL Server Concurrency

After completing this Topic, you will be able to:

- Explain concurrency and transactions
- Describe locking

Topic 6: Statistics and Index Internals

This Topic covers Statistics and Index Internals. It focuses on architectural concepts and best practices related to Statistics and Indexes.

Lessons

- Statistics Internals and Cardinality Estimation
- Index Internals
- Columnstore Indexes

Lab: Statistics and index Internals

After completing this Topic, you will be able to:

- Describe statistics internals
- Explain cardinality estimation
- Describe why you would use Columnstore indexes and be able to implement one

Topic 7: Query Execution and Query Plan Analysis

This Topic covers Query Execution and Query Plan Analysis. It focuses on architectural concepts of the Optimizer and how to identify and fix query plan issues.

Lessons

- Query execution and optimizer internals
- Query execution plans
- Analyzing query execution plans
- Adaptive query processing

Lab: Query execution and query plan analysis

After completing this Topic, you will be able to:

- Describe query execution and optimizer
- Analyze query plans and resolve common issues

Topic 8: Plan Caching and Recompile

This Topic covers Plan Caching and Recompile. It focuses on architectural concepts, troubleshooting scenarios and best practices related to Plan Cache.

	<p>Lessons</p> <ul style="list-style-type: none">• Plan cache internals• Troubleshooting plan cache issues• Automatic tuning• Query store <p>Lab: Plan caching and recompilation</p> <p>After completing this Topic, you will be able to:</p> <ul style="list-style-type: none">• Describe plan cache• Troubleshoot plan cache issues• Describe query store and why you would use it <p>Topic 9: Extended Events</p> <p>This Topic covers Extended Events. It focuses on architectural concepts, troubleshooting strategy and usage scenarios for Extended Events.</p> <p>Lessons</p> <ul style="list-style-type: none">• Extended events core concepts• Working with extended events <p>Lab: Extended events</p> <p>After completing this Topic, you will be able to:</p> <ul style="list-style-type: none">• Describe the core concepts of extended events• Implement extended events <p>Topic 10: Monitoring, Tracing, and Baselining</p> <p>This Topic covers tools and techniques to monitor, trace and baseline SQL Server performance data. It focuses on data collection strategy and techniques to analyze collected data.</p> <p>Lessons</p> <ul style="list-style-type: none">• Monitoring and tracing• Baselining and benchmarking
--	---

Lab: Monitoring, Tracing and Baselineing

After completing this Topic, you will be able to:

- Describe various options for monitoring and tracing
- Describe various options for benchmarking and baselining
